### GPI Anchor Biosynthesis in Yeast and Fungi

**Figure: GPI biosynthetic pathway in yeast and fungi.** GPI biosynthesis begins on the cytoplasmic face of the ER by the ER-localized GPI N-acetylglucosaminyl transferase (GPI-GnT) with transfer of GlcNAc from UDP-GlcNAc to PI. GlcNAc-PI is then deacetylated, sequentially decorated by 4 Man residues and 3 EtnP residues. The donor for mannose is Dol-P-Man and of EtnP is phosphatidylethanolamine in all cases. GPI-GnT has six subunits, Gpi1, Gpi2, Gpi3, Gpi15, Gpi19 and Eri1. Gpi12 is a deacetylase, Gwt1 an acyltransferase that attaches an acyl chain at 2-OH of inositol. The GPI intermediate must flip from the cytosolic to the luminal side of the ER for Gwt1 to act, but a specific flippase has not been identified. MT-I (Gpi14, Pbn1), MT-II (Gpi18, Pga1), MT-III (Gpi10) and MT-IV (Smp3) are the mannosyltransferases. Mcd4, Gpi7, Gpi11, Gpi13 are EtnP transferases. Gpi7 and Gpi11 act independently. GPIT is the transamidase consisting of subunits Gpi8, Gpi16, Gpi17, Gaa1 and Gab1, which removes the GPI attachment signal sequence from proteins and attaches a preformed GPI anchor to their C-terminal ends via a transamidation reaction. The most likely pathway and possible branched pathways are shown. Where evidence is not clear for a specific step, broken arrows, rather than solid arrows are shown. (Komath et al., 2018 IUBMB Life. 70(5):355-383.)

The main focus of the lab currently is **glycosylphosphatidylinositol (GPI) anchor biosynthesis in the human pathogen, *C. albicans***. The GPI anchor is a complex glycolipid anchor that is ubiquitously present in eukaryotes. An elaborate pathway of roughly 10-12 steps works sequentially to produce the precursor GPI anchor in the endoplasmic reticulum. It is then attached to the C-terminal ends of proteins that carry the GPI attachment signal sequence. A variety of proteins may be held by means of this anchor to the extracellular leaflet of the plasma membrane (and/ or cell wall). In lower eukaryotes the biosynthetic pathway leading to the formation of the complete GPI anchor is essential to the viability and functioning of the organism, making it an attractive drug target; in higher eukaryotes it is critical at certain stages of organismal development, such as in embryogenesis, but not at others.

My lab has been working to understand the molecular details of this pathway. This task is particularly challenging given that it involves mostly multi-subunit membrane-bound enzymes. There are no commercially available substrates for most steps of the pathway and assay protocols that are successful for one system do not always work for another system. Listed below are some of our major contributions to the field:

- We showed that the enzyme complex involved in the first step of GPI anchor biosynthesis in *C. albicans*, the GPI-*N*-acetylglucosaminyltransferase (GPI-GnT), is mutually co-regulated with ergosterol biosynthesis in the organism and is closely linked to Ras signalling/ hyphal morphogenesis and drug-response in the organism. This has ramifications for controlling *Candida* infection and countering its drug-resistance. While controlling hyphal morphogenesis is seen as a key step towards controlling virulence in this pathogen, ergosterol and the sterol biosynthetic pathway are the most important targets for therapeutic intervention in controlling *Candida* infections. Current work is focused on better understanding the intra-subunit cross-talk as well as the mechanisms of the cross-talk of this step with ergosterol biosynthesis and Ras signaling in *C. albicans vis-à-vis S. cerevisiae*.
- We are also interested in comparing the active site of the enzyme involved in the second catalytic step of the pathway, the de-*N*-acetylation of GlcNAc-PI, between organisms. We showed that the *E. histolytica* de-*N*-acetylase is a close homologue of the yeast enzyme and exhibits a unique metal-independent general acid-base pair catalytic mechanism. In contrast the *C. albicans* homologue shows metal-dependent activity in cell-free systems. Current work is focused on studying the *C. albicans*, *S. cerevisiae* and mammalian enzymes.
- We showed that *CaGPI14*, encoding the first mannosyltransferase step, affects growth and hyphal morphogenesis in *C. albicans*. Hyphal morphogenesis is inhibited due to an upregulation of the *HOG1* pathway. We also showed that the cross-talk with ergosterol biosynthesis seen in the case of GPI-GnT is not effective at this step.
- A third line of enquiry in the lab is focused on understanding the GPI transamidation step and the role of signal sequences in GPI anchor attachment. We showed that the *C. albicans* Gpi8 subunit is a metal-dependent endopeptidase. We have developed a simple cell free assay to study this activity. Current work in this project is focused on better understanding the mechanism of its endopeptidase activity. In addition, we are studying the role of four other subunits of the GPI Transamidase (GPIT), CaGpi16, CaGpi17, CaGaa1 and CaGab1, in the transamidase reaction as well exploring their essentiality for the cell. During this process, we also seek to understand the minimal characteristics of a GPI anchor attachment signal sequence that the transamidase can correctly process for GPI-attachment.

## Invited Talks in 2021

1. Dressed to Kill: Coordinated expression of GPI anchored virulence factors with hyphal morphogenesis in the human pathogenic fungus, *Candida albicans*. Talk given at **NASI-DDUC Webinar Series Women in Science Lecture Workshop**, conducted at Deen Dayal Upadhyay College, Delhi University, 24<sup>th</sup> February, 2021.
2. Speaker at webinar on **STIP 2020 and the Future of Scientific Research in India**, organized by Zakir Hussain Centre For Education Studies, Jawaharlal Nehru University, New Delhi on 11<sup>th</sup> March 2021.
3. Women in Science: Gender issues and lab cultures. Talk given **on invitation by the Internal Complaints Committee**, Shiv Nadar University, Noida (UP), 3<sup>rd</sup> March, 2021.

## Details of Funded Research Projects

### Current Projects:

1. Exploring the mechanism of endopeptidase activity of *Candida albicans* Gpi8. Approved. **SERB-POWER Fellowship**. 2021.
2. Studying the catalytic subunit of the GPI *N*-acetylglucosaminyl transferase in *Candida albicans*. Approved for funding by **DBT**. 2021. Rs. 88.57 lakhs
3. Activation of GPI *N*-acetylglucosaminyl transferase in *Candida albicans*. Approved for funding by **SERB(DST)**. 2021. Rs. 63.22 lakhs (March 2021-2024)
4. Role of *ERG5* and *ERG4* in *Candida albicans* and the effect of ergosterol loss on GPI anchor biosynthesis, transport and location. **CSIR**, India (May 2019-2022). Rs. 16.5 lakhs
5. Structure-function analysis of GPI biosynthetic enzymes. (Co-PI). Project funded by **DBT** (2019-2022). Rs. 113.10 lakhs.
6. Elucidating the cross-talk between histone acetyltransferases and ATP-dependent chromatin remodelers proteins in *C. albicans* and mammalian cells. (Co-PI). Project funded by **STARS** (2019-2022). Rs. 94.0 lakhs

**Description :**

The programme was organised as an IQAC initiative with a view to provide a model for writing a research proposal. In the institution, many faculty are pursuing research activities and the newly joined faculty with almost experience require a model to understand the methodology of writing research proposal which is viable. Also, many students, especially in final year course work must be aware of writing a strong proposal.

The programme started with the opening remarks by Dr.G.Maithreyi, Assoc.Professor, Dept. of S&H followed by the introduction of the speaker to the audience by Dr.A.Padmaja, convenor of the event and HoD of Science and Humanities.

**Department of Science and Humanities**

The talk focused on the literary aspects of writing. The brevity and conciseness of the nature of writing is important to sustain. The speaker clearly spoke on the need of maintaining conciseness and clarity in writing. She chose to illustrate different situations using live examples. The whole talk was useful and informative. She also shared tips on how to write a winning proposal and how to approach different bodies for funding.

In the last fifteen minutes, the speaker graciously answered all the queries raised by the audience. The programme was concluded by the proposal of vote of thanks by Mr.V.Yellamanda, Asst.Prof. in the S&H Dept.

All the participants who registered for the program received e certificates.
