CIRCULAR

This is to bring to your notice that our college proposed to organize a “One day Guest lecture on Environmental Awareness” for B. Tech III, IV Year I semester Civil Engineering students on 16/09/2016. Students are instructed to attend and make this event grand success. Further details will be displayed on the notice board.

Details of Resource Person: Dr. M. V. S. N. Raju, Professor, V. R. Siddhartha Engineering College, Vijayawada.

Venue: Seminar Hall - (Ground Floor)

PROGRAM REPORT

Name of the Event: One Day Guest Lecture on ENVIRONMENTAL AWARENESS.

Date: 16/09/2016.

Timings: 10:00 AM to 4:00 PM

Duration: One Day.

Resource Person: Dr. M. V. S. N. Raju,

Professor,
Department of Civil Engineering,
V. R. Siddhartha Engineering College,
Vijayawada.
Ph No: 9885199560.
Email ID: drmvsraju@gmail.com

Name of the Coordinator: N. Karanthi Rekha, Assistant Professor, Civil Engineering,
SRKIT, Vijayawada

Number of students participated: 186

PROGRAM OBJECTIVES:

- Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

ENIKEPADU, VIJAYAWADA-521 108

TOPICS COVERED:

Our environment faces several problems, and many of these seem to be worsening with time, bringing us into a time of a true environmental crisis. It is therefore becoming increasingly important to raise awareness of the existence of these issues, as well as what can be done to reduce their negative impact. Some of the key issues are:

SESSION: 1

1) Pollution

Pollution of the air, water and soil caused by toxins such as plastics, heavy metals and nitrates, caused by factors such as toxins and gases released by factories, combustion of fossil fuels, acid rain, oil spill and industrial waste.

2) Global warming

The emission of greenhouse gases due to human activity causes global warming, which in turn causes an increase in temperature that then leads to rising sea levels, melting of polar ice caps, flash floods and desertification.

3) Over population

We are facing a shortage of resources such as food, water and fuel to sustain the rising global population, particularly in developing countries. Intensive agriculture attempting to lessen the problem actually leads to more damage through the use of chemical fertilizers, pesticides and insecticides.

4) Waste disposal

An excessive amount of waste is produced and dumped in the oceans. Nuclear waste is particularly dangerous, as well as plastics and electronic waste.

SESSION: 2

5) Ocean acidification

The increase in the production of carbon dioxide by humans causes the oceans' acidity to rise, which has a negative impact on marine life.

6) Loss of biodiversity

Species and habitats are becoming extinct due to human activity. This causes an imbalance in natural processes like pollination and poses a threat to ecosystems – coral reef destruction is particularly affected.

PRINCIPAL

SRK Institute of Technology
ENIKEPADU, VIJAYAWADA-521 108.

7) Deforestation

Loss of trees in order to make space for residential, industrial or commercial projects means that less oxygen is produced, and temperature and rainfall are affected.

8) Ozone layer depletion

Pollution caused by chlorofluorocarbons (CFCs) in the air creates a hole in the ozone layer, which protects the earth from harmful UV radiation.

9) Acid rain

Pollutants in the atmosphere such as sulphur dioxide and nitrogen oxides cause acid rain, which has negative consequences for humans, wildlife and aquatic species.

10) Public health issues

Lack of clean water is one of the leading environmental problems currently. Pollutants in the air also cause issues such as respiratory disease and cardiovascular disease.

PROGRAM OUTCOMES:

- Understand core concepts and methods from ecological and physical sciences and their application in environmental problem-solving.
- Appreciate key concepts from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Appreciate that one can apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
